

Solve for x :

$$\frac{3}{x} + 4 = 5$$

$$3 - \frac{x - 2}{4} = 4$$

$$\frac{10y + 1}{2} = \frac{4(7y + 1)}{5}$$

$$\frac{3}{p} - 2 = \frac{5}{2p} - \frac{2}{3p} + \frac{7}{6p}$$
